Bobby Filippopoulos

Frontend Software Developer

Calgary, AB · filippopoulosbobby@gmail.com · linkedin.com/in/bobbyfilip

SUMMARY

Frontend developer with 6+ years on production SaaS in React and TypeScript. Owns large features end to end in long-lived codebases: state architecture, data-dense interfaces, performance work, and the test coverage alongside them.

EXPERIENCE

Turing Analytics

Sep 2022 – May 2026

Software Developer · Calgary, AB / Remote

Cloud-based analytics platform for the energy sector · React, TypeScript, Redux, React Query, Mapbox GL, ECharts, GraphQL, Jest

- Led a multi-sprint refactor of the map layer architecture, replacing a tightly coupled tree with a modular ordered layer list with session persistence and render-order sync. Coordinated the API design with two backend developers.
- Cut **subsequent layer interaction time from ~10s to ~200ms** on a 1,200-layer dataset by updating existing layers instead of recreating them on every interaction.
- Built search and bulk selection for a **1,200-layer** tree, keeping checkbox state correct when filtering hid part of the tree.
- Built a **25,000-cell** in-browser data grid with copy/paste across cells, rows, columns and ranges, plus column and row management and change-tracked bulk save.
- Consolidated dashboard logic from three entry points into shared hooks with explicit context parameters, removing a class of cross-workspace state bugs and adding per-hook tests.
- Diagnosed state synchronization bugs spanning three independent system layers, where chart, map, and legend views fell out of sync.
- Wrote **100+** Jest and React Testing Library suites across state hooks, data transforms, and chart translators.
- Built three statistical and time-series chart types and a cross-chart style system that persists across chart type switches.
- Mentored developers on React and TypeScript patterns and presented sprint deliverables to stakeholders and leadership.

Sunhund

Apr 2021 – Present

Freelance Web Developer · Remote

- Built a static event site fronting a YouTube live stream, provisioned for **20,000 concurrent viewers**, with content-hashed assets so clients pick up updates on refresh.
- Deliver client web development from brief through launch, including brand and design assets where a project calls for it.

VelocityEHS

Apr 2019 – Apr 2021

Software Developer · Oakville, ON / Remote

Enterprise Environmental Health & Safety SaaS platform · React, TypeScript, MobX State Tree, .NET, Go

- Built and maintained frontend features for an enterprise EHS platform, extending into .NET and Go services, and progressed from an implementation role to full development responsibility.
- Established React component patterns, MobX State Tree architecture, and TypeScript standards adopted across the frontend team.
- Implemented the team's component library and Storybook setup, speeding onboarding and reducing component bugs.

EDUCATION

Computer Systems Technology, Software Development

2018

Mohawk College · Hamilton, ON

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML/CSS, SQL, C#, Go (familiar)

Frontend: React, Redux, React Query (TanStack), Mapbox GL, ECharts, GraphQL, MobX State Tree, Storybook

Testing: Jest, React Testing Library, CodeCov

Tools: Git/GitHub, Jira, Confluence, Node.js, npm/yarn, Claude and GitHub Copilot (daily, output reviewed)
